Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 4 and 5 are drawn to motor vehicle lamp initializing by a digital sequencing means, classified in class 700, subclass 11.
- II. Claims 2 and 3 are drawn to a variation of temperature in controlling lamp luminosity, classified in class 315, subclass 309.

These inventions above are distinct from the other because of the following reasons:

1. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because temperature variation, as required in claim 2 of invention II, causes a change in lamp luminosity while only current/voltage level cross the lamp affects the lamp's intensity as required in claim 1 of the invention I. The subcombination has separate utility such as the lamp can be dimmed/controlled via sensing/detecting ambient temperature.
2. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
